Log PMO (μM)	Percent Inhibition
-1.5	~32
-1.0	~50
-0.5	~82
0.0	~92

Detailed description of Figure 1: This is a line graph with error bars. The vertical axis (Y-axis) is labeled 'Percent Inhibition' and ranges from 0 to 100 in increments of 25. The horizontal axis (X-axis) is labeled 'Log PMO (μM)' and ranges from -2 to 0. There are four data points plotted as solid black circles, each with a vertical error bar. A smooth curve is drawn through these points, showing a sigmoidal increase in inhibition as the log concentration of PMO increases. The data points are approximately at (-2.5, 35), (-1.5, 55), (-0.5, 78), and (0, 75).

Log PMO (μM)	Percent Inhibition (approx.)
-2.5	35
-1.5	55
-0.5	78
0	75

Fig. 4B

Log dose (nM)	Percent death
0.5	18
1.5	40
2.5	55
3.0	58
3.5	58
